(54) Title: VIEWING DEVICE WITH ORIENTATING IMAGING DEVICE

(57) Abstract: The invention relates to the provision of an optical device having first and second viewing passages which are selectively spaced apart to suit the interocular distance between a user's eyes. The device also included at least one image capturing device to allow a digital image to be captured. The invention provides a means whereby adjustment between the first and second viewing passages can be taken into account when capturing the image so as to reduce the problems caused by the angular adjustment.
